KIDS COUNT in Delaware E

News, Research and Policy Information September 30, 2015

The High Public Cost of Low Wages

A recent UC Berkeley study examined the impact of poverty on American taxpayers. Poverty is not only a problem for the low-income families struggling to make ends meet, but also for state and federal assistance programs and the taxpayers that support them. "When jobs don't pay enough, workers turn to public assistance in order to meet their basic needs. These programs provide vital support to millions of working families whose employers pay less than a livable wage. Higher wages and increases in employer-provided health insurance would result in significant savings that states and the federal government could apply to other programs and priorities." In Delaware, Medicaid and TANF cost the state \$321 million dollars annually. Read more here:

Measuring a City's Attitude

YASSER PAYNE

In Wilmington, kids are 27% of the population. The University of Delaware's own Professor Yasser Arif Payne has published his findings of a study he conducted in Wilmington in 2010. Through the Participatory Action Research (PAR) model, Payne sent teams of young Wilmington residents (neighborhood to neighborhood, not just to survey the city's inhabitants, but to revitalize the community spirit in what he calls a "social action program." His study tells a story of anxiety and frustration amidst a 50% drop out rate in Wilmington's youth and a high rate of unemployment. Read about Professor Payne's study here; or watch his TEDx talk [here](#).

EITC and Child Tax Credit At Risk

The Earned Income Tax Credit (EITC) is the nation's most effective anti-poverty program for working families. Many households could be facing future hardships if National leaders do not continue key provisions of the federal EITC and Child Tax Credit (CTC) past 2017. Here in Delaware, more than thirty thousand workers in key industries would lose all or part of their EITC and CTC if key provisions are not continued. Across the nation, more than 19 million workers are in danger of losing those tax credits. Read the full report [here](#).

February 1, 2016

DAY 21
150 Session Days Left

KIDS COUNT in Delaware highlights 10 indicators which underscore our goal to achieve a world where:

- pregnant women and newborns thrive,
- infants and young children receive the support they need to enter school prepared to learn,
- adolescents choose healthy behaviors, and older youth experience a successful transition into adulthood.

In all of these stages of development, young people need the economic and social assistance provided by a strong family and a supportive community.

Did You Know?

Advancement Via Individual Determination (AVID) targets students in the academic middle - B, C, and even D students - who have the desire to go to college and the willingness to work hard. It has a proven track record in bringing out the best in students, and in closing the achievement gap. Currently, 23 Delaware middle and high schools have the **AVID** program. **AVID** pulls these students out of their unchallenging courses and puts them on the college track: acceleration instead of remediation.

How Do You Use the Data?

“As a state and a nation, we’ve made great strides over the last 20 years focusing on children using what we know works. We know that focusing efforts on early education sets these children up for greater success when they reach school.

We also know that providing parents with employment, reliable transportation to get to work, and affordable child care has a tremendous impact on the family as a whole. And through meaningful research and data from **KIDS COUNT**, we’ve discovered much, much more.

Thanks to **KIDS COUNT in Delaware**, we are able to better ensure we are doing everything we can to allow children to grow and thrive in the First State.”

– Thomas Carper, U.S. Senator
